DEVELOPMENT

Fall 2024: Cultivating Inclusive Teaching and Learning Environments, *IU Astronomy Dept.* Participant in a 60-minute in-person workshop exploring foundational concepts and proven strategies for creating inclusive classroom environments. Developed a plan to implement inclusive strategies in a future course.

Fall 2022-Present: PyIU: A Workshop Series on Python Essentials, *IU Astronomy Dept.* Founder and lead organizer of the PyIU crash course and workshop series hosted by IU graduate students covering various topics related to Python and intended for IU STEM undergraduates. Topics include fundamentals such as installation, variables, logic, functions, loops, and plotting, as well as more advanced aspects such as classes, environments, handling and analysis of large datasets, subplots, scientific packages, and much more. PyIU GitHub: github.com/BrandonRadzom/pyiu

Summer 2023: NASA Planetary Science Summer School, *Jet Propulsion Laboratory (JPL)*. Was selected to join a cohort of 18 graduate students and post-docs across various disciplines to engage in an 11-week planetary mission design program. For the first 10 weeks, I remotely received training on mission formulation from NASA mentors and worked with my cohort as Deputy PI and Science Objective Lead to design a New Frontiers-class orbiter to Titan (in response to the NF5 AO). I assumed the role of Science Subsystem Chair during the culminating week and worked with NASA's Team-X in person at JPL to finalize the mission design before presenting it to a review panel of NASA engineers, scientists, and executives as a mock Portfolio Gate Review. The concept study has been accepted to the Planetary Science Journal. Program link: jpl.nasa.gov/edu/intern/apply/nasa-science-mission-design-schools/. Media interview: news.iu.edu/college/live/news/35938-graduate-students-summer-experience-at-nasas-jet

Summer 2023: Code/Astro Software Engineering Workshop, *Northwestern University*. Was selected to participate in the 2023 Code/Astro Workshop which covered best practices for producing and publishing open-source astronomy software. Topics included managing Python environments, git and GitHub, de-bugging tools, releasing code to PyPI and GitHub, documentation of code (using docstrings & Sphinx), software testing, and employing anti-discriminatory practices. In parallel, I worked with a small group to develop and publish a pip-installable package for planning observations with IU's Kirkwood Observatory called `kirkwoodnight` (GitHub: github.com/ag161920/kirkwoodnight, PyPI: pypi.org/project/kirkwoodnight). Program link: semaphore.github.io/codeastro.

Spring 2021: Bring an Inclusive Mindset to Your Teaching, *IU*. Participant in a 90-minute virtual workshop discussing data-driven techniques to make classrooms more inclusive to all, especially members of minoritized groups.
